

Javalin Distribution Ship™

World-class supply chains run on
Kewill shipping solutions

Javalin DS™

Features:

Javalin Distribution Ship (DS) is a robust multi-carrier shipping management system that is best suited to a single location supporting a warehouse or distribution center. This enterprise application is designed for quick implementation to maximize the 'time-to-benefit'.

Javalin DS has an open architecture and the capacity to scale to meet your future or peak shipping requirements. Our customers use it to make the right transportation decisions across parcel and LTL carriers.

- **Broad range of carrier compliance for U.S. parcel and LTL carriers**
- **Advanced rate shop capabilities**
- **Implement 'out of the box' business rules for workflow interoperability**
- **Increased operational visibility into shipments and carrier service levels**
- **Transactional Queuing architecture for high performance and scalability**
- **Open API for connectivity with internal legacy/host applications**
- **Integration templates and interfaces to the major ERP and WMS applications**

"We believe our customer focus is a key competitive advantage. We needed a solution that will scale with our growth and can be integrated tightly with our customer-centric supply chain. Furthermore, the coordination and flexibility of Javalin will help us meet customer delivery deadlines while optimizing shipping costs."

- Lorne Brockway, Director of IT Support at drugstore.com Inc.

PRODUCT

Latest Technology:

Javalin DS is built on the latest technology, designed for scalability, maximum fulfillment and delivery performance.

- Architecture designed for high performance and high volume shipping
- Support for standard databases such as Oracle, DB2 and SQL Server
- Continuous operation capability
- Low total cost of ownership (TCO)

Business Rules Engine:

Javalin DS works in any organizational configuration, supporting existing business processes through the use of its business rules engine.

- Compiled 'Out-of-the-Box' business rules for speed of processing
- Facilitates rapid, seamless integration by minimizing changes to processes or host applications
- Support for WMS wave planning
- Perform address cleansing, delivery point validation and residential delivery confirmation to minimize assessorial charges and identify all shipment costs for invoicing purposes

Zone Skipping:

Consolidate your shipments and save money by using carriers whose services offer drop ship, break bulk or zone skipping capabilities.

- Reduce fulfillment costs by consolidating parcels and gain higher discounts
- Benefit in cost saving by delivering shipments to a sorting center closer to the final destination
- Provide further economical options to your customers

LTL Shipping:

Javalin DS helps you make the right transportation decisions across parcel and LTL carriers.

- Rate shop across parcel and LTL carriers in one streamlined process
- Manage LTL shipment rating for custom rates and assessorial charges
- Support for more than 3000 LTL carriers
- Incorporates the Czarlite rate tariffs
- Manage PRO numbers and Bill of Lading (BOL) generation

Visibility:

Javalin DS provides enhanced visibility into the supply-chain including international orders that involve multiple legs and transportation modes.

- Reduce the time you spend tracking shipments
- Quickly provide your customers with up-to-date shipment information
- Customers and employees gain shipment visibility in real-time, online or via proactive messaging with customizable advance shipment notifications
- Track shipments for zone skipping services across multiple carriers
