

Javalin Enterprise Ship™

World-class supply chains run on
Kewill shipping solutions

Javalin ES™

Features:

- Operates in different shipping modes
- Manage distributed shipping locations from a single solution.
- US and International shipping capability.
- Increased operational visibility into shipments and carrier service levels.
- Transactional Queuing architecture for high performance and scalability.
- Open API for connectivity with internal legacy/host applications.
- Integration templates and interfaces to the major ERP and WMS applications.
- Implement complex business rules for enhanced workflow interoperability.
- Broadest range of carrier compliance of parcel and LTL carriers in the market.

Javalin Enterprise Ship (ES) is a multi-carrier shipping management system for the desktop shipper, the mailroom, and the warehouse. Javalin ES gives you the ability to ship from anywhere to anywhere.

Designed with an open architecture, Javalin ES has the capacity to scale to meet your future or peak shipping requirements. This enterprise solution supports complex business rules, high volumes of shipments and multiple locations.

"We believe our customer focus is a key competitive advantage. We needed a solution that will scale with our growth and can be integrated tightly with our customer-centric supply chain. Furthermore, the coordination and flexibility of Javalin will help us meet customer delivery deadlines while optimizing shipping costs."

- Lorne Brockway, Director of IT Support at drugstore.com Inc.

PRODUCT

Enterprise Solution:

Javalin ES provides a holistic approach to shipping management by delivering the solution that covers the entire spectrum of enterprise shipping requirements.

- Unattended or 'black box' mode for highly automated, high volume warehouse or distribution centers that require integration with complex environments using material handling systems and host applications
- Desktop shipping for the occasional shipper who requires an easy to use interface. Scalability to support thousands of distributed users, with user and cost center management features
- Attended mode for manned shipping stations for the mailroom or warehouse environment

Latest Technology:

Javalin ES is built on the latest technology, designed for scalability, maximum fulfillment and delivery performance.

- Architecture designed for high performance and high volume shipping
- Benchmarked at 2 million labels per hour
- Support for standard databases such as Oracle, Sybase and SQL Server
- Continuous operation capability

Multiple Locations:

Javalin ES can be configured to manage multiple locations, warehouses or distribution centers from a single software instance.

- Hosted Enterprise Shipping Solution capability
- Ease of management for daily operations and carrier compliance updates
- Communicate with multiple host systems
- Consolidate your shipping operations to better leverage assets, resources and buying power
- Lower your total cost of ownership through centralized management

Complex Rules Engine:

Javalin ES is designed to work in any organizational configuration and with any business processes through the use of its business rules engine.

- Compiled business rules for speed of processing
- Facilitates rapid, seamless integration by minimizing changes to processes or host applications
- Select carrier and service automatically based on user defined criteria
- Drive compliant documentation and perform denied party lookups based on consignee and destination, including printing the correct customs paperwork

International Shipping:

Javalin ES can help you ship from anywhere to anywhere in the world.

- Ship to international customers more cost effectively and reliably
- Expand into new international markets
- Natural Language Support (NLS) for ease of integration with regional distribution centers
- Print double byte character labels for far-east deliveries
- Address validation for over 220 countries
- Manage complex export documentation such as shippers export declaration, commercial invoices, denied party screening and harmonization codes

Visibility:

Javalin ES provides enhanced visibility into the supply-chain including international orders that involve multiple legs and transportation modes.

- Reduce the time you spend tracking shipments
- Quickly provide your customers with up-to-date shipment information
- Customers and employees gain shipment visibility in real-time, online or via proactive messaging with customizable advance shipment notifications
