

Kewill.Ship Enterprise

Browser-enabled, enterprise-wide, multi-carrier shipping solution managed from a centralized server.

Kewill.Ship 

Achieve new levels of shipping automation easily, efficiently and cost-effectively:

- One server to manage
- Open system architecture
- Multi-Carrier Compliance
- Electronic Manifesting
- Compliance Label Generation
- Rate Shopping
- Data Integration
- Reporting
- Printing Solutions

"Kewill.Ship Enterprise has made the job a lot simpler and it corrects any errors we make ourselves. It's virtually eliminated errors. Fewer mistakes keep customers happier."

— Jason Adcock, e-commerce fulfillment manager for Men's Wearhouse

FEATURES

Enterprise-wide Shipping Automation:

Kewill.Ship Enterprise is a browser-enabled application for organizations seeking an enterprise-wide multi-carrier system, managed through centralized administration tools. With one system to manage, administrators eliminate the need to perform software updates and compliance changes at multiple locations.

Multi-Carrier Compliance:

Automate shipping with all major carriers including:

- Airborne
- DHL
- FedEx Express
- FedEx Ground
- UPS
- US Postal Service
- LTLs & generic carriers

Rate Shopping: To get the best carrier rates and services, you need to shop around. Kewill.Ship Enterprise considers more than just shipping rates, it can also analyze a combination of factors, thereby minimizing costs and improving service.

LTL/Generic Carriers: Replace independent Less Than Load (LTL) software programs with one system that automates them all. Define carriers in addition to those already supported including custom, local, regional and LTL carriers.

Printing Solutions and Reporting: Turn raw shipping data into incredibly useful management information. Generate an array of carrier-compliant and custom forms, labels and reports.

Integration with other Business Applications: Link your shipping department to other applications to exchange valuable shipping information. Import consignee address information. Export data such as tracking numbers and shipping charges.

BENEFITS

- Submit shipments via a common browser from any enterprise location
- Provide virtual storefronts for securing orders without limiting your ability to distribute from multiple locations and suppliers
- Gain more flexibility and control over systems maintenance with centralized system administration
- Integration of shipping and rating functionality into COM-compatible applications without the burden of maintaining frequent carrier rate and methodology changes

- Streamline your shipping process for all major carriers and LTLs
- Generate extensive shipment and labor savings
- Generate compliance labels, forms, manifests, and reports
- Integrate with other business applications to eliminate inefficiencies
- Transmit electronic manifests to reduce paperwork and simplify billing
- Maintain one consignee list and one history file for all shipments for easy tracking and analysis

- Compare rates across carriers to generate extensive shipment savings
- Analyze a combination of factors including rates with special service fees, days-in-transit, weight ranges, user-defined destination ZIPs and carrier performance rating, and consolidated-multiple and standard-multiple pricing

- Maintain one database, one consignee list, and one history file for all shipments
- Define rate tables for domestic and international shipments
- Rate shop across LTLs and non-LTLs including multiple classes within a shipment
- Impose various rate discount methods

- Print carrier-required documents such as manifest reports, compliance labels, waybills, and export documents
- Print invoices, custom reports and forms
- Centralized data allows management of information to automate the shipping process and properly monitor shipping activity, analyze costs, and identify future trends

- Automate your entire shipping process
- Eliminate repetitive data entry and reduce errors
- Improve customer service
- Simplify and improve accounting
- Integration of shipping and rating functionality into a COM-compatible application without the burden of maintaining frequent rate and methodology changes
